Arjun Khade *Software Developer*

9545176916 khadearjun@gmail.com LinkedIn GitHub Portfolio Website

Results-driven Software Developer with 3.5+ years of experience building scalable, **responsive web** applications using **Angular**, **React.js**, TypeScript, JavaScript, HTML5, CSS3, and SCSS. Skilled in developing **Progressive Web Applications** (PWAs), reusable UI components, **Forms**, and **RESTful API** integrations with Angular Material for seamless, mobile-first, **cross-browser** experiences. Experienced in **Angular migration** (v13 → v15 → v18→ v21), **performance optimization** via lazy loading and code splitting, **RxJS**-based state management.

PROFESSIONAL EXPERIENCE

Aloha Technology Pvt. Ltd. 01/2023 – Present | Pune, India

Software Developer - PrecisionCare (Healthcare Domain)

- Engineered a Progressive Web Application (PWA) using **Angular**, Angular Material, and TypeScript, delivering a responsive, mobile-first user experience for healthcare workflows.
- Architected **reusable**, **modular UI** components and implemented service workers for offline support and **caching**, improving application reliability in low-connectivity environments.
- Built dynamic, validation-driven forms using **Angular Forms**, enabling real-time validation and accurate clinical data capture.
- Integrated **RESTful APIs** with backend teams, ensuring seamless, low-latency data communication across services.
- Optimized application performance through **lazy loading,** route management, and code splitting, reducing initial load times and improving responsiveness.
- Implemented reactive programming patterns using **RxJS** to manage **observables** and asynchronous data streams across complex UI workflows.
- Adopted modern Angular practices by migrating to **standalone components** (removing NgModule), implementing **Signal-based reactivity** for fine-grained state management, utilizing **built-in Control Flow** to replace legacy structural directives, and enabling **zoneless change detection** to eliminate Zone.js overhead — collectively improving performance, maintainability, and alignment with Angular's modern architecture.
- Leveraged **AI-powered** code assistance tools to accelerate development, optimize **code quality**, and adopt modern Angular best practices.
- Ensured **cross-browser compatibility** using HTML5, CSS3, and SCSS, and improved **page load performance** through SVG and WebP image optimization.
- Led frontend debugging and root-cause analysis of integration issues using Chrome **DevTools**, maintaining high code quality and application stability.
- Drove **Angular project migrations** (v13 → v15 → v18→ v21), ensuring backward compatibility, eliminating deprecated APIs, and enabling adoption of modern Angular features.
- Participated in **Agile** ceremonies (sprint planning, stand-ups, code reviews), consistently delivering high-quality releases on schedule.

Software Developer

Electronic Visit Verification (EVV) — Progressive Web Application (PWA)

- Architected and developed a healthcare-grade **Progressive Web Application (PWA)** for Electronic Visit Verification (EVV), delivering offline-first functionality, native-like user experience, and reliable clinical data capture.
- Engineered offline-first architecture using Angular **Service Workers** and Workbox caching strategies, enabling uninterrupted EVV workflows in areas with poor or no network connectivity.
- Implemented static asset and dynamic API response **caching,** ensuring real-time visit data remained accessible offline and synced automatically upon reconnection via background sync.
- Configured Web App Manifest (icons, splash screens, display modes) to enable seamless **PWA installation on Android and iOS** devices, delivering a native-like experience without app store dependency.
- Captured and persisted critical visit details — including **geolocation coordinates, staff information, and visit timestamps** — securely storing encrypted visit records in **localStorage**, ensuring data integrity and offline availability until network sync.
- Built **mobile-friendly, template-driven forms** using Angular Forms and Angular Material, enabling field staff to log visit data efficiently on handheld devices with touch-optimized inputs and real-time field-level validation.
- Implemented **custom PWA installation and update notification popups** by handling BeforeInstallPromptEvent and Angular Service Worker update lifecycle events, providing users with a seamless install experience and ensuring the latest app version was always served without manual refresh.

EDUCATION

Post Graduate Diploma in Advanced Computing (PG-DAC) 2022
CDAC ACTS, Pune

B.Tech./B.E. 2019 | Maharashtra
Savitribai Phule Pune University

TECHNICAL SKILLS

Frontend: Angular, Angular Material, NgRx, Angular Signals, React.js, Redux, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap, JavaScript, TypeScript

Backend: Core Java, Spring Boot, Spring Data JPA, RESTful APIs, Microservices

Database: MySQL, SQL, PostgreSQL, MongoDB

Tools & DevOps: Git, GitHub, Bitbucket, SourceTree, Jira, Postman, Swagger, AWS (EC2), CI/CD(basic)

Build & Deployment: Vite, Parcel, Create React App (CRA), NPM, Jest (Testing)

PROJECTS

AI-Powered Fitness Application | Spring Boot Microservices Dec 2025 – Jan 2026
Tech Stack: Java, Spring Boot, Spring Cloud, Eureka, Gateway, Kafka, Keycloak, OAuth2, Google Gemini AI, PostgreSQL, MongoDB, REST APIs, Docker.

- Architected a **microservices-based** fitness platform using Java 17, **Spring Boot**, and Spring Cloud with independently deployable User, Activity, and **AI Recommendation** services.
- Implemented event-driven communication using Apache **Kafka** (Activity Service as Producer, AI Service as Consumer) to trigger real-time AI fitness recommendations via **Google Gemini** AI API.
- Secured APIs using Keycloak with OAuth2 and PKCE flow, with centralized routing and token validation via **Spring Cloud Gateway** and service discovery via **Eureka Server**.
- Applied database-per-service pattern using PostgreSQL and MongoDB, and managed configurations using Spring Cloud **Config Server**.
- Containerized Kafka and Keycloak using **Docker** and integrated a React frontend with secured backend APIs through the **API Gateway.**

ACHIEVEMENTS

- Successfully led the end-to-end **Angular framework migration (v13 → v15 → v18 → v21)**, ensuring zero downtime, full backward compatibility, and adoption of modern Angular features across a production healthcare application.
- Delivered an **Electronic Visit Verification (EVV) Progressive Web Application (PWA)** with full **offline functionality**, enabling uninterrupted data capture and verification for healthcare field workers in low-connectivity environments.
- Built an **Angular application from scratch**, architecting the project structure, component hierarchy, and routing strategy from the ground up to support long-term scalability.
- Designed and developed **50+ reusable UI components**, establishing a consistent, modular component library that accelerated feature delivery across the application.
- Recognized for delivering high-quality, production-ready Angular applications ahead of schedule, improving user experience and system performance by over 30% through optimized component design and lazy loading.

CERTIFICATES

- Angular (Intermediate) – HackerRank (2026)
- Namaste React - 2025
- Namaste JavaScript – 2025
